11/13/2025

To whom it may concern,

I am writing to provide a recommendation of Anthony Spencer for your consideration.

Since August of 2023, I have been Anthony's computer programming instructor at the Erie County Technical School. In this time, I have been beyond impressed with his ability to absorb and apply information, follow specific instructions, and deliver on advanced extension projects with very little direction or guidance.

Anthony is an extremely smart individual who loves to learn and explore on his own. Every day he would come in and tell me about new concepts he spent the previous evening studying. Not only did Anthony show incredible drive to learn, but he also showed a passion for improving his surroundings. He would often suggest topics for the class to cover, and at times would give lessons he developed on concepts he felt were important for others to learn. Anthony has been an enormous asset in the classroom. He has not only made several suggestions that helped to improve our course, but he also developed applications we use on a daily basis and has helped to provide support to students who take a bit longer to learn the materials.

Anthony has shown a very high level of engagement and interest in personal growth both in and outside of the classroom. He attended several cyber security camps at Gannon University in the summer and inspired several of his peers to go as well. He has also helped to win the regional Skills USA web development competition for our program and is currently leading a team of $1st$ year Cyber Patriot competitors that is on track to rank in the upper 20% of the country.

I am confident that Anthony will perform above and beyond expectations in any opportunity his is given the chance to engage with. I believe he is destined to be a valuable contributor to the field of Computer Science (or any other field the piques his interest). I strongly recommend Anthony for your consideration within your organization/university.

If you require any additional information, please do not hesitate to reach out to me via the email below and I will be happy to share anything I am able.

Thank you,

Jason Klins
